

# Climeworks Solutions product sheet

## Direct Air Capture 100%

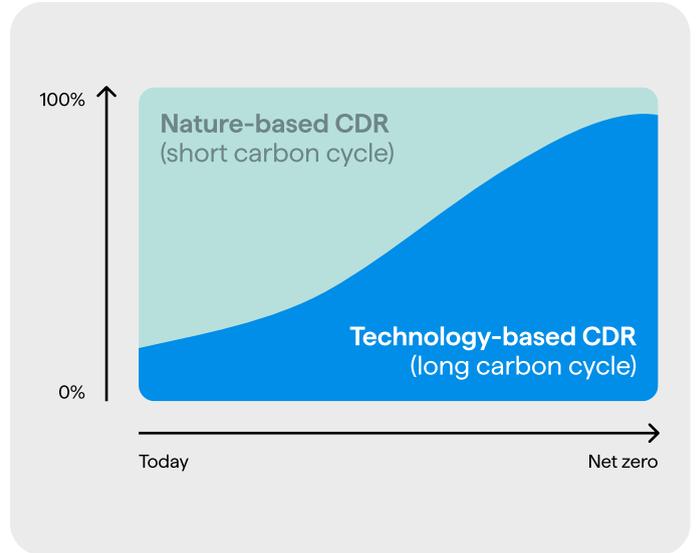

### The Climeworks Solutions products

Climeworks offers standardized Carbon Removal Portfolios based on scientific guidance. Portfolios consist of different carbon removal credits, representing the removal of a specified quantity of carbon dioxide from the air. These credits are sourced from (i) Climeworks' own direct air capture facilities representing the highest quality form of carbon removal on the market, and (ii) projects from third-party carbon removal suppliers utilizing various technology and nature-based carbon removal solutions, vetted for highest quality within their domain.

### The Direct Air Capture 100% product

Maximize impact and support innovation with this product fully enabling carbon dioxide removals with Direct Air Capture and Storage.

This product is available upon request, please get in touch for a quote or purchase at [pioneers@climeworks.com](mailto:pioneers@climeworks.com)

\*Illustrative portfolio evolution, as per scientific guidance

Direct Air Capture with Storage

100%

**Technology-based CDR**  
Highest quality & innovation

### How this product works

At the time of purchase, customers will receive an order confirmation and invoice and can track their orders from the [Climeworks dashboard](#).

Deliveries take place within 6 years following the year of purchase.

Upon delivery of the order, customers will receive a delivery note specifying the details of the removals including supplier information – and link, when applicable – to the certifying/verifying entity and associated registry.

Climeworks can change the composition of its standard Carbon Removal Portfolios over time. The composition at time of purchase is what defines the portfolio composition planned to be delivered over the delivery lifetime.

### The Benefits

**Permanent and scalable**, leveraging **cutting-edge innovation**

**Certified, verified, purchased by thousands** of large companies, SMEs and individuals

**Easy and convenient** access to **scalable** carbon removal
